Internship

Vincent Paquereau
Data Analyst

My project : gap year

2 Internships From June 2024 to
September 2025

- 6 months
- 1 in France
- 1 in another country

Data Analyst

A data analyst interprets and analyzes complex sets of data to extract valuable insights and support informed decision-making within an organization.

MISSIONS

- Data analysis to identify trends, patterns, and correlations.
- Use of statistical tools and techniques to draw meaningful conclusions.
- Contribution to the design and optimization of databases.
- Implementation of data visualization methods to make results accessible.
- Interpretation of results and formulation of recommendations for decision-making.

AVANTAGES

- The number of organizations adopting AI from 2015 until 2019 increased by 270%.
- Employment projected to grow by 22% in US alone by 2030
- The machine learning market will grow to nearly \$9 billion in 2022.
- The average salary for a data scientist in the United States is approximately \$122,300 per year.

DISAVANTAGES

- Long work hours, lots of overtime
- High pressure
- Fast-paced evolution in the field
